

cyberManor of Los Gatos Integrates HP Products in *Sunset* Idea Houses

LOS GATOS, CA (July 25, 2003) – cyberManor—a home network designer, integrator and installer based in Los Gatos—announced today that it has joined with HP to showcase the company's newest line of consumer entertainment and productivity electronic products in *Sunset* magazine's California Collection Idea Houses located in Los Gatos. cyberManor designed, installed and integrated the networking systems that support the HP products in the homes.

The two new "idea" homes—featuring what *Sunset* editors deem the latest innovations in architecture, construction, design, and technology—will be open to the public from August 8th to October 5th.

HP products featured in the homes include the HP Media Center PC m200n series, the HP Digital Media Receiver 5000, the HP iPAQ Pocket PC, and the HP Tablet PC TC1000.

Some of the HP applications demonstrated in *Sunset's* California Collection homes include:

- Displaying and playing album covers and music on a large screen television linked to an HP Media Center PC
- Control of the home theater components with an HP iPAQ Pocket PC
- Wireless transfer of digital pictures from the Media Center PC to the large home theater entertainment screen using the HP Digital Media Receiver 5000
- Document printing from the wireless HP Compaq Tablet PC TC1000 from the home office or backyard gazebo

Gordon van Zuiden, president of cyberManor, says, "HP's products, when properly integrated into the entertainment, communications, and security systems of the home, create a wide range of extremely useful applications for the homeowner. Visitors to the *Sunset* idea homes will gain a realistic understanding and appreciation of what these products can do for them in their own homes."

"Working with cyberManor on this project has helped us showcase an HP solution that encompasses digital entertainment and computing, all working together throughout the home," said Ameer Karim, Director of Worldwide Product Marketing for HP's Consumer PC division. "These are products that are available today that greatly enhance the lifestyle and enjoyment of today's networked home."
